**MUST HAVE**

**BEST FEATURES AWARD!**

TweakTown

**The Bottom Line:** RaidSonic's Icy Box IB-MP305A-B HD network multimedia player is a very solid product and one of the best we have tested so far. It manages to add in some extra features such as internet radio streaming as well as an intelligent menu interface. Still no Windows 7 network streaming support (until a new firmware update... *that is hopefully released soon*) or Gigabit ethernet LAN, but that's about all it lacks.

Considering all that's on offer here the Icy Box IB-MP309HW-B HD Media Player

manages to overcome its interface's shortcomings through sheer technical merit. It offers an incredibly flexible and capable HD media platform, able to play almost any codec out there with ease, while also bringing the advantages of network storage and the ability to stream even the meatiest HD content. While it's not as accomplished as it possibly could have been, if you're looking to get your video collection off of your PC and onto your flatscreen then make no mistake, this device is a still an extremely worthy choice.
